Out of Water: From Abundance to Scarcity and How to Solve the World's Water Problems Colin Chartres, Samyuktha Varma
From cities to biofuels, competition for water is accelerating. Climate change threatens to intensify the onset and severity of the water crisis in several regions of the developing world: this is already happening throughout much of Asia, the Mediterranean, southwestern Australia, and the southwestern US. Along with water shortages, unsafe water becomes an increasingly widespread problem, too. As water crises trigger food and health crises, billions may slip further into poverty, leading to greater social and political unrest, new wars, and worsening national security. **Out of Water** doesn't just illuminate the coming global water crisis: it presents innovative solutions in agriculture, engineering, governance, and beyond, including state-of-the art techniques for integrated water management. This book will help raise the level of debate about water to the highest levels of government, and identify workable reforms and incentives to help water users utilize this crucial resource far more efficiently.
