A Survey of Combinatorial Theory

A Survey of Combinatorial Theory
A Survey of Combinatorial Theory covers the papers presented at the International Symposium on Combinatorial Mathematics and its Applications, held at Colorado State University (CSU), Fort Collins, Colorado on September 9-11, 1971. The book focuses on the principles, operations, and approaches involved in combinatorial theory, including the Bose-Nelson sorting problem, Golay code, and Galois geometries.

The selection first ponders on classical and modern topics in finite geometrical structures; balanced hypergraphs and applications to graph theory; and strongly regular graph derived from the perfect ternary Golay code. Discussions focus on perfect ternary Golay code, finite projective and affine planes, Galois geometries, and other geometric structures. The book then examines the characterization problems of combinatorial graph theory, line-minimal graphs with cyclic group, circle geometry in higher dimensions, and Cayley diagrams and regular complex polygons.

The text discusses combinatorial problems in finite Abelian groups, dissection graphs of planar point sets, combinatorial problems and results in fractional replication, Bose-Nelson sorting problem, and some combinatorial aspects of coding theory. The text also reviews the enumerative theory of planar maps, balanced arrays and orthogonal arrays, existence of resolvable block designs, and combinatorial problems in communication networks.

The selection is a valuable source of information for mathematicians and researchers interested in the combinatorial theory.

From reader reviews:

Heather Sessoms:

Do you have favorite book? If you have, what is your favorite's book? Guide is very important thing for us to know everything in the world. Each publication has different aim or even goal; it means that publication has different type. Some people truly feel enjoy to spend their time to read a book. These are reading whatever they acquire because their hobby will be reading a book. What about the person who don't like studying a book? Sometime, man or woman feel need book if they found difficult problem or exercise. Well, probably you will want this A Survey of Combinatorial Theory.

Robert Jenkins:

A lot of people always spent their very own free time to vacation as well as go to the outside with them household or their friend. Do you know? Many a lot of people spent they will free time just watching TV, as well as playing video games all day long. If you need to try to find a new activity this is look different you can read some sort of book. It is really fun for you. If you enjoy the book which you read you can spent 24 hours a day to reading a e-book. The book A Survey of Combinatorial Theory it is extremely good to read. There are a lot of those who recommended this book. These people were enjoying reading this book. When you did not have enough space to create this book you can buy the particular e-book. You can m0ore effortlessly to read this book through your smart phone. The price is not too costly but this book provides high quality.

Jennifer Rogers:

You could spend your free time to read this book this publication. This A Survey of Combinatorial Theory is simple to deliver you can read it in the park your car, in the beach, train and soon. If you did not include much space to bring often the printed book, you can buy the actual e-book. It is make you much easier to read it. You can save often the book in your smart phone. Thus there are a lot of benefits that you will get when one buys this book.

Douglas Holmes:

Don't be worry if you are afraid that this book may filled the space in your house, you could have it in e-book approach, more simple and reachable. This particular A Survey of Combinatorial Theory can give you a lot of buddies because by you taking a look at this one book you have issue that they don't and make a person more like an interesting person. That book can be one of one step for you to get success. This reserve offer you information that might be your friend doesn't recognize, by knowing more than additional make you to be great individuals. So , why hesitate? Let me have A Survey of Combinatorial Theory.
