Arid Lands Water Evaluation and Management (Environmental Science and Engineering) Robert G. Maliva, Thomas M. Missimer
A large part of the global population lives in arid lands which have low rainfall and often lack the water required for sustainable population and economic growth. This book presents a comprehensive description of the hydrogeology and hydrologic processes at work in arid lands. It describes the techniques that can be used to assess and manage the water resources of these areas with an emphasis on groundwater resources, including recent advances in hydrologic evaluation and the differences between how aquifer systems behave in arid lands versus more humid areas. Water management techniques are described and summarized to show how a more comprehensive approach to water management is required in these areas, including the need to be aware of cultural sensitivities and conditions unique to many arid regions. The integration of existing resources with the addition of new water sources, such as desalination of brackish water and seawater, along with reusing treated wastewater, will be required to meet future water supply needs. Also, changing climatic conditions will force water management systems to be more robust so that future water supply demands can be met as droughts become more intense and rainfall events become more intense. A range of water management techniques are described and discussed in order to illustrate the methods for integrating these measures within the context of arid lands conditions.

From reader reviews:

Wendell Darnell:

Hey guys, do you really wants to finds a new book you just read? May be the book with the title Arid Lands Water Evaluation and Management (Environmental Science and Engineering) suitable to you? Often the book was written by renowned writer in this era. The particular book untitled Arid Lands Water Evaluation and Management (Environmental Science and Engineering)is one of several books which everyone read now. That book was inspired a lot of people in the world. When you read this guide you will enter the new shape that you ever know ahead of. The author explained their strategy in the simple way, and so all of people can easily to comprehend the core of this publication. This book will give you a lot of information about this world now. In order to see the represented of the world with this book.

Patricia Frazier:

This Arid Lands Water Evaluation and Management (Environmental Science and Engineering) is great book for you because the content that is certainly full of information for you who have always deal with world and get to make decision every minute. This specific book reveal it info accurately using great organize word or we can claim no rambling sentences inside it. So if you are read that hurriedly you can have whole details in it. Doesn't mean it only provides you with straight forward sentences but tough core information with attractive delivering sentences. Having Arid Lands Water Evaluation and Management (Environmental Science and Engineering) in your hand like keeping the world in your arm, facts in it is not ridiculous 1. We can say that no guide that offer you world with ten or fifteen second right but this book already do that. So , this really is good reading book. Hey there Mr. and Mrs. active do you still doubt this?

Stephanie Bush:

As we know that book is vital thing to add our information for everything. By a e-book we can know everything we would like. A book is a range of written, printed, illustrated or even blank sheet. Every year has been exactly added. This book Arid Lands Water Evaluation and Management (Environmental Science and Engineering) was filled in relation to science. Spend your free time to add your knowledge about your scientific research competence. Some people has various feel when they reading the book. If you know how big selling point of a book, you can feel enjoy to read a reserve. In the modern era like today, many ways to get book that you simply wanted.

Julia Barr:

As a pupil exactly feel bored for you to reading. If their teacher expected them to go to the library or to make summary for some guide, they are complained. Just very little students that has reading's heart or real their interest. They just do what the professor want, like asked to the library. They go to generally there but nothing reading really. Any students feel that examining is not important, boring and can't see colorful images on there. Yeah, it is for being complicated. Book is very important to suit your needs. As we know

that on this age, many ways to get whatever we wish. Likewise word says, ways to reach Chinese's country. So , this Arid Lands Water Evaluation and Management (Environmental Science and Engineering) can make you truly feel more interested to read.
