Current Research on Information Technologies and Society: Papers from the 2013 Meetings of the American Sociological Association

Current Research on Information Technologies and Society: Papers from the 2013 Meetings of the American Sociological Association

Research on communication and information technologies is of growing importance to sociology and the interdisciplinary examination of communication and (new) media. This volume includes eight chapters examining recent developments in the field, illustrating the maturation, vibrancy, and diversity of this field of study as well as pointing to rich new avenues for scholarly exploration. Contributions aptly chart three key developments that characterize current research on communication and digital media. First, chapters demonstrate the maturation of work on measurement, demonstrating the importance of refining measurements of online activities and their consequences. For instance, contributions evaluate: social network measures frequently used in online research; alternative measures for online activity; and alternative measures of Twitter activity. Second, the volume showcases continued work on understanding user behaviour, including research on the consequence of reward systems similar to badges and on the limitations of purely technological solutions to social dilemmas in emergency preparedness. Finally, chapters identify emerging questions for the field related to social media, such as research on potential privacy and identity implications of social media, different dispositions toward social media use, and variation in levels of social media usage.

This book was originally published as a special issue of *Information, Communication & Society*.
